

# Marine Spatial Planning is **maritime development** on maps

With **Symphony** we plan with an Ecosystem Based approach

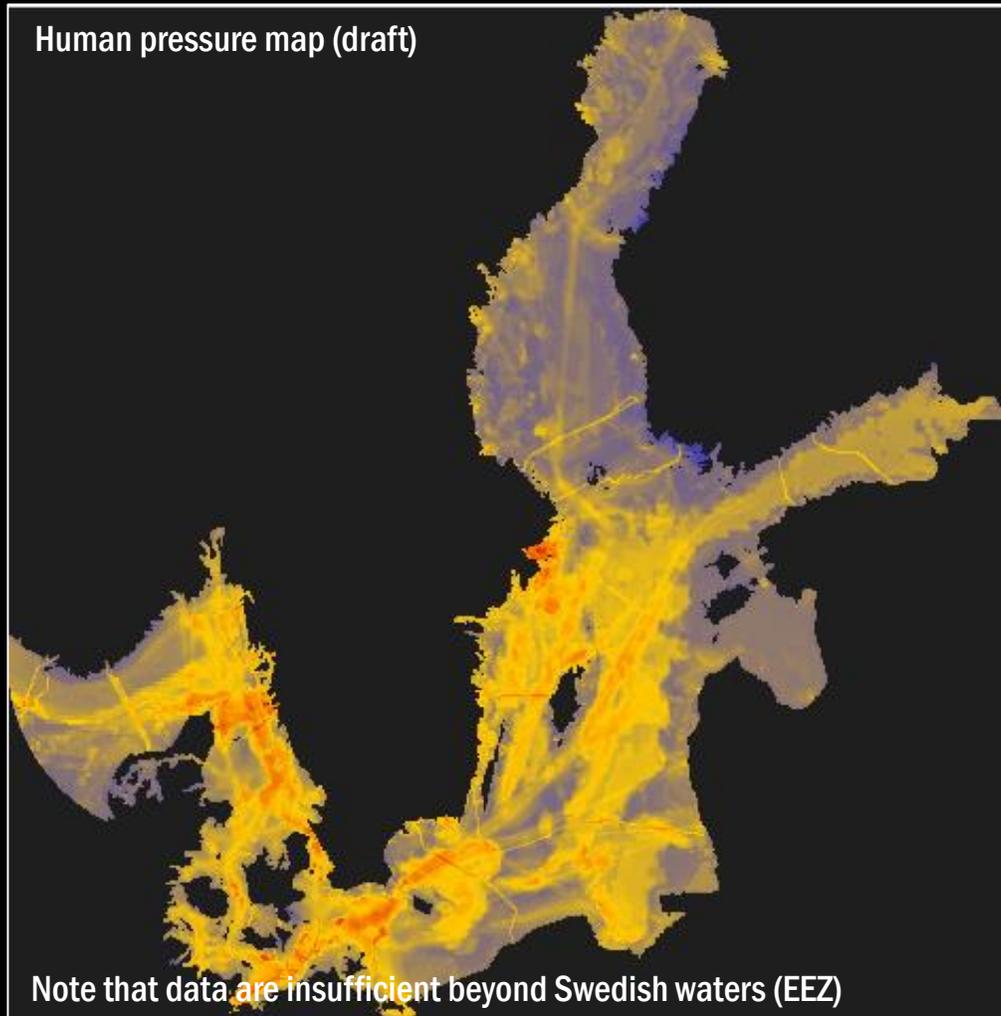

# Marine Spatial Planning is **maritime development** on maps

The **Baltic** have valuable ecosystem components

Swedish Agency  
for Marine and  
Water Management

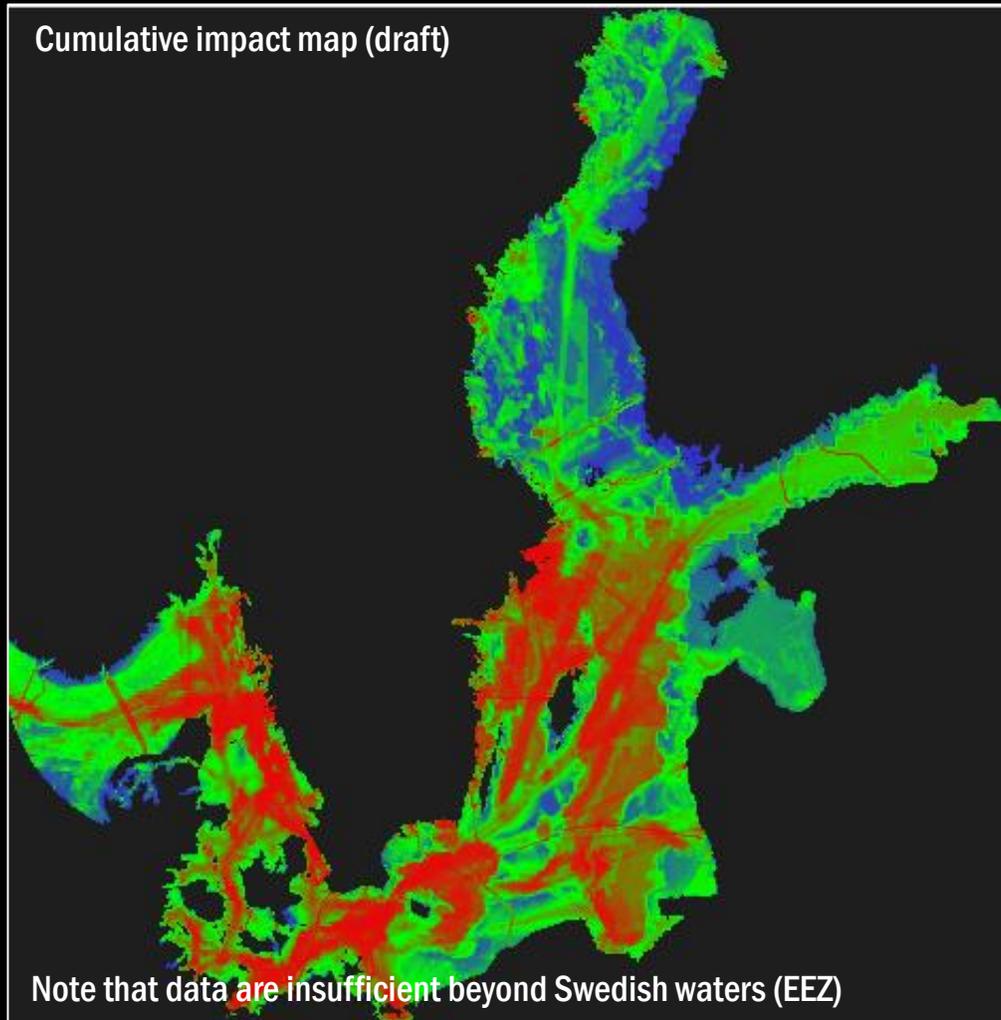

# Marine Spatial Planning is **maritime development** on maps

Human activities cause **pressure** on environment

Swedish Agency  
for Marine and  
Water Management

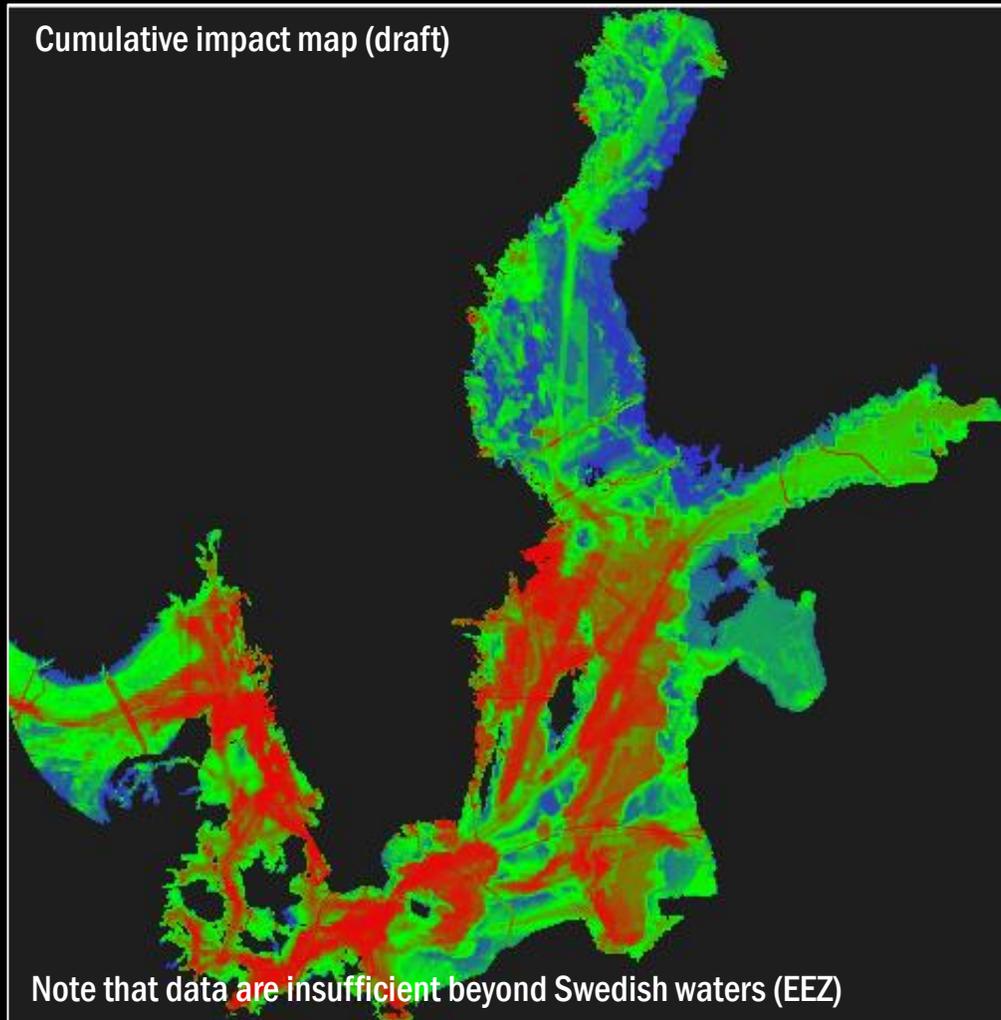

# Marine Spatial Planning is **maritime development** on maps

With Symphony we estimate  
the **cumulative** impact

Swedish Agency  
for Marine and  
Water Management

# Marine Spatial Planning is **maritime development** on maps

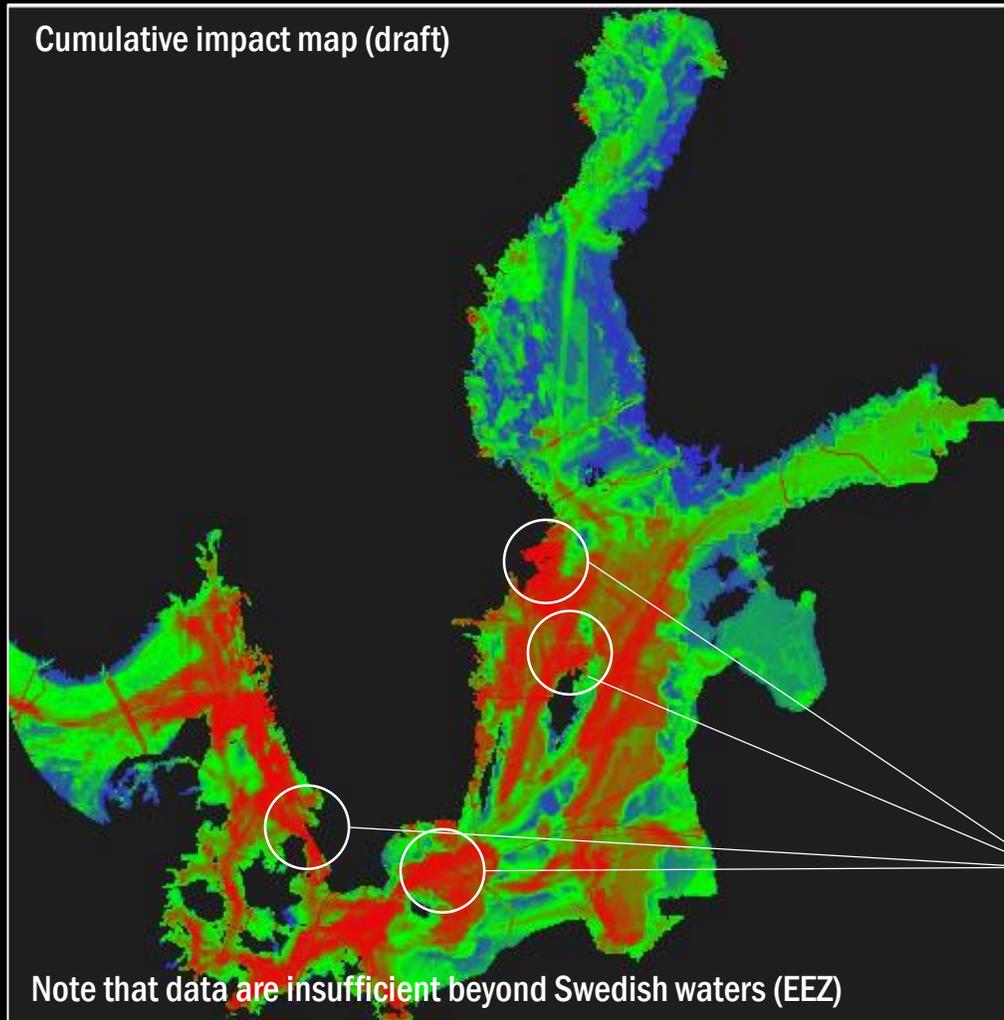

With Symphony we estimate  
the **cumulative** impact

This informs us of how to make  
more **sustainable** plans

Swedish Agency  
for Marine and  
Water Management

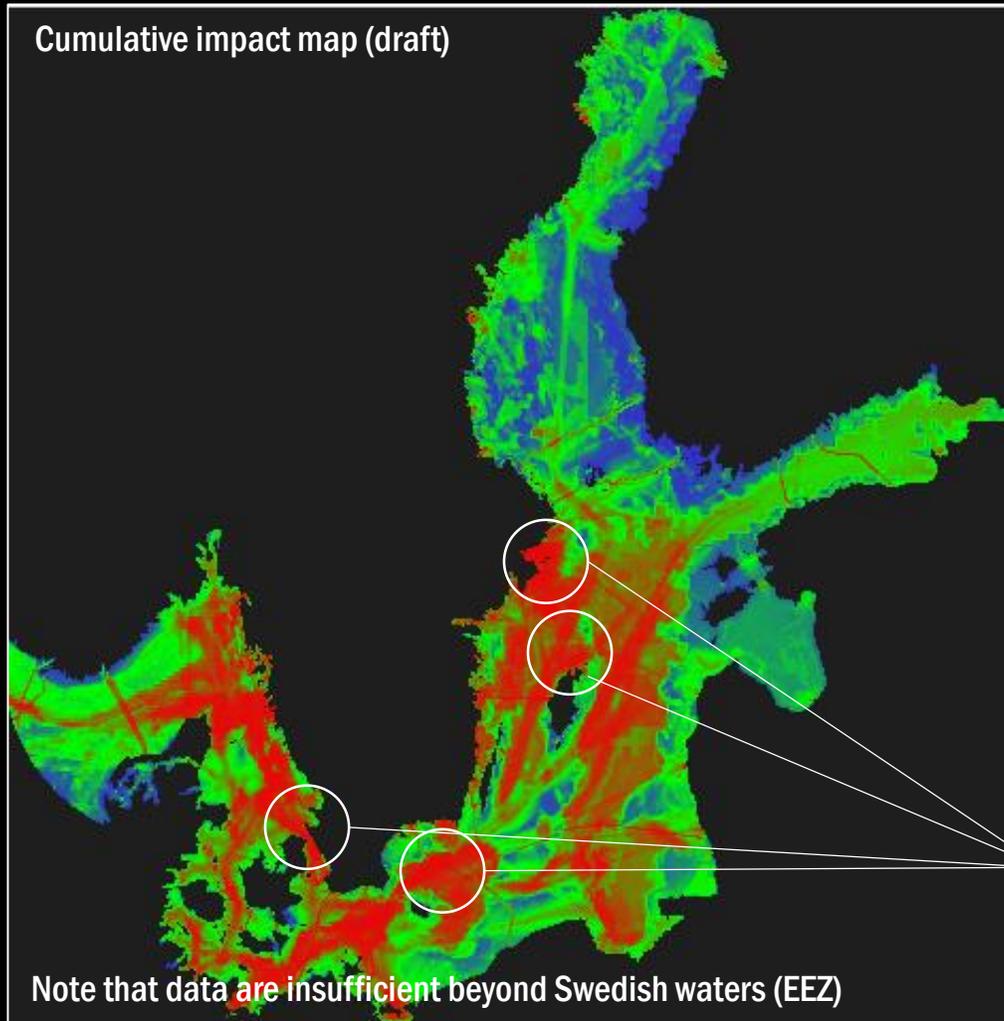

# Marine Spatial Planning is **maritime development on maps**

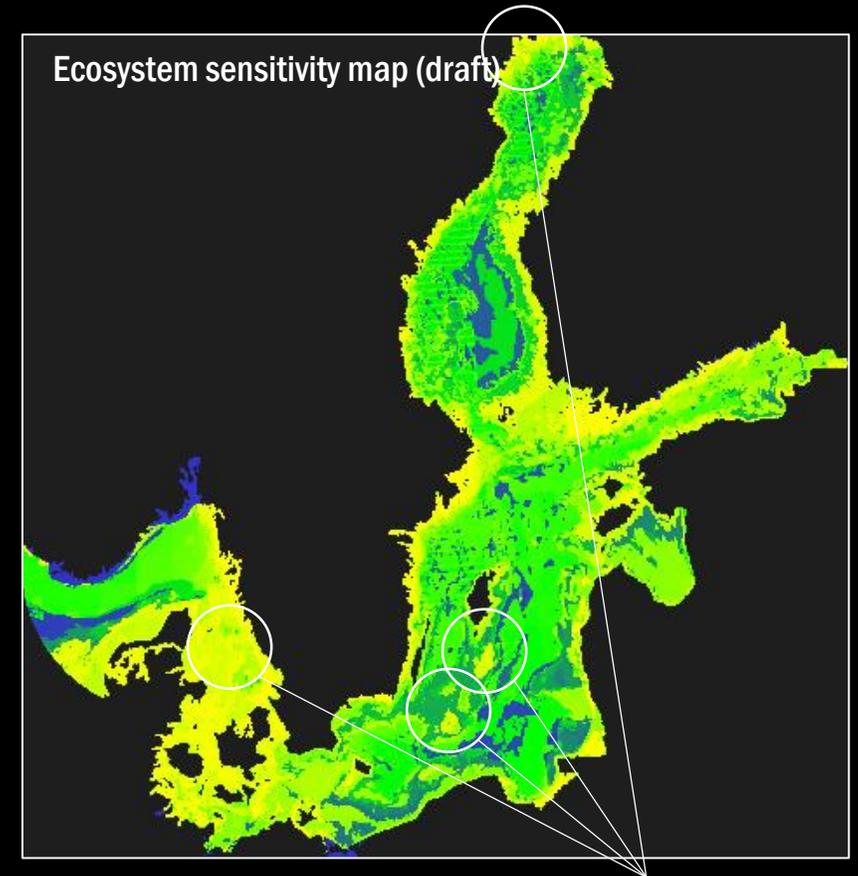

Symphony help us to identify **areas** of concern

Swedish Agency  
for Marine and  
Water Management

# Marine Spatial Planning is **maritime development on maps**

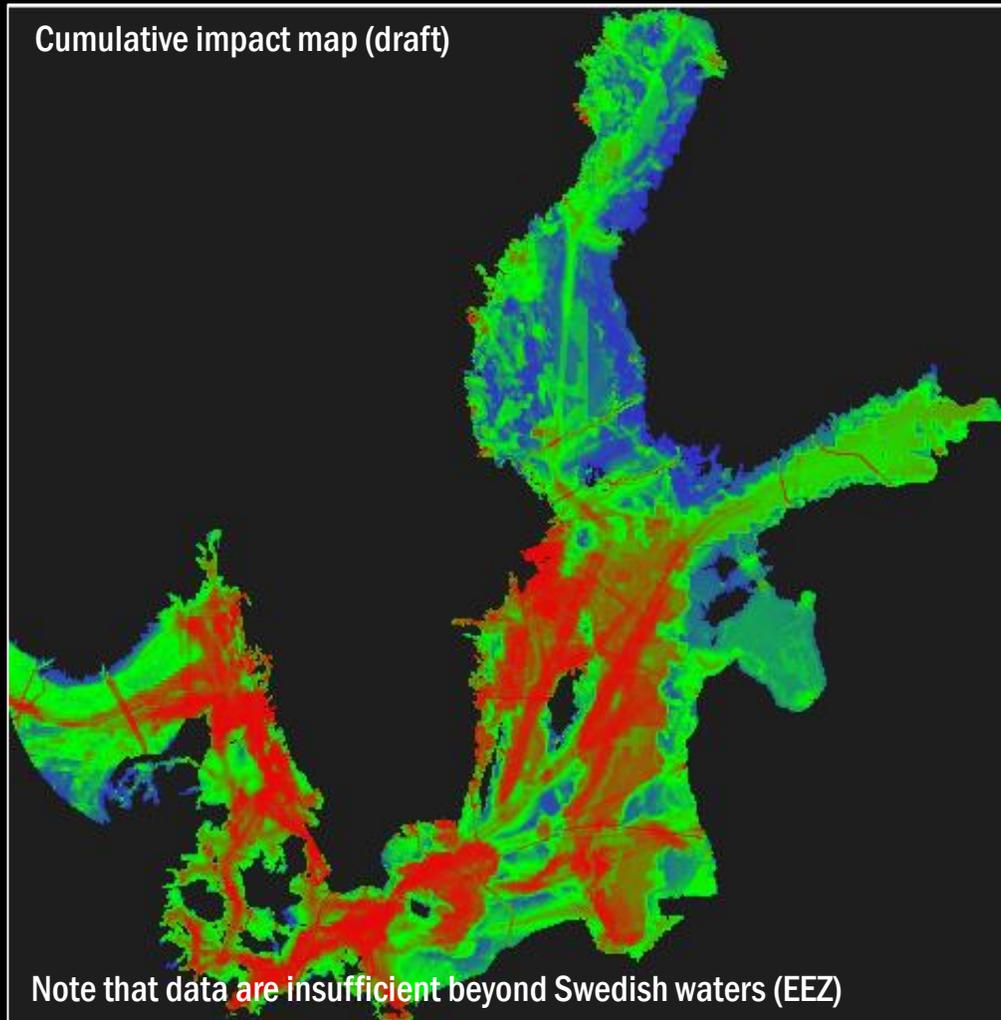

Symphony help us to identify **areas** of concern

And shows where **ecosystems** are most sensitive

# Marine Spatial Planning is **maritime development** on maps

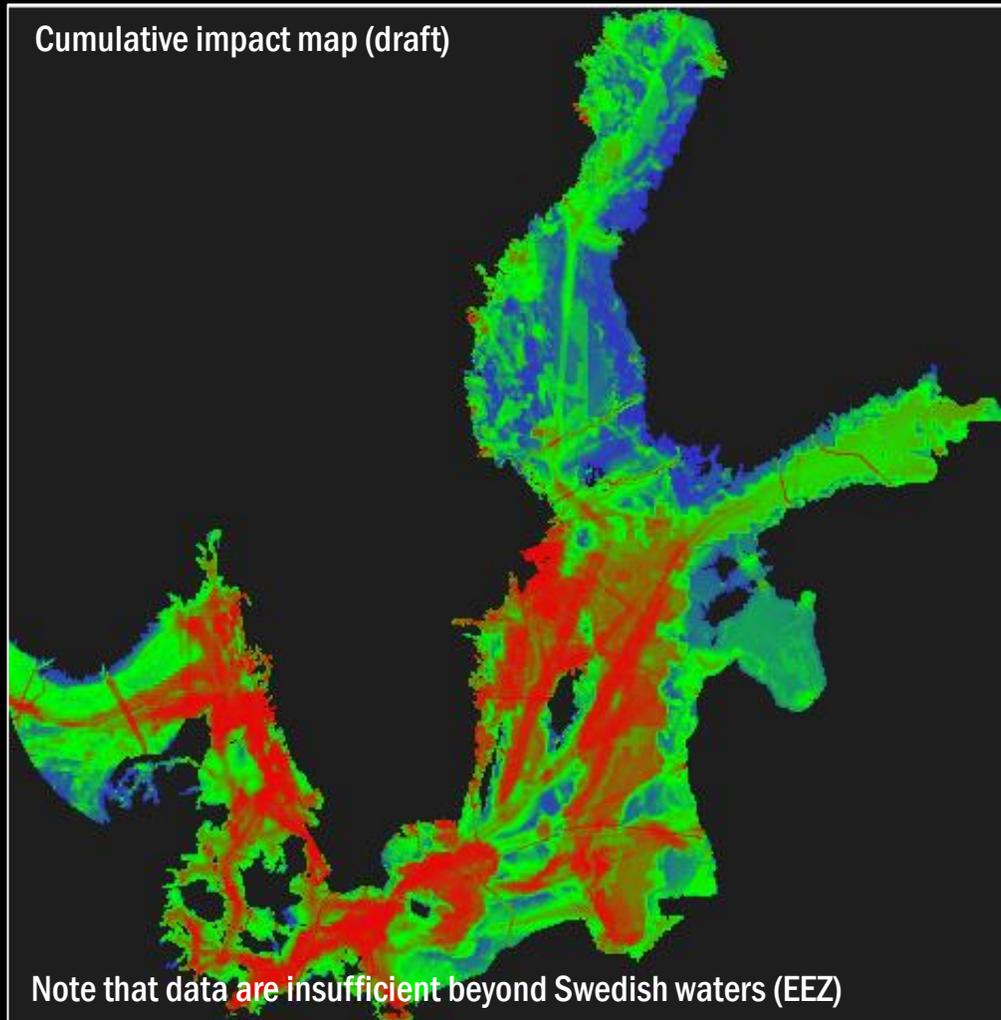

## With help of Symphony

- ..we identify problems in our plans
- ..we consult stakeholders
- ..we test new alternatives
- ..we plan for **sustainable development**

Swedish Agency  
for Marine and  
Water Management

# Marine Spatial Planning is **maritime development** on maps

## Symphony info

- ..this map builds mainly on Swedish data (not all Baltic)
- ..this map builds on 27 ecosystem components
- ..this map builds on 19 human pressures
- ..13 of the pressures will be linked to our MSP plans
- ..this map builds on incomplete sensitivity scores

**Symphony MSP tool is under development**

Symphony is being developed by the Swedish Agency for Marine and Water Management in collaboration with the Swedish Geological Survey

# Marine Spatial Planning is **maritime development on maps**

## Symphony method

**1** Maps of ecosystem components

**2** Maps of marine pressures

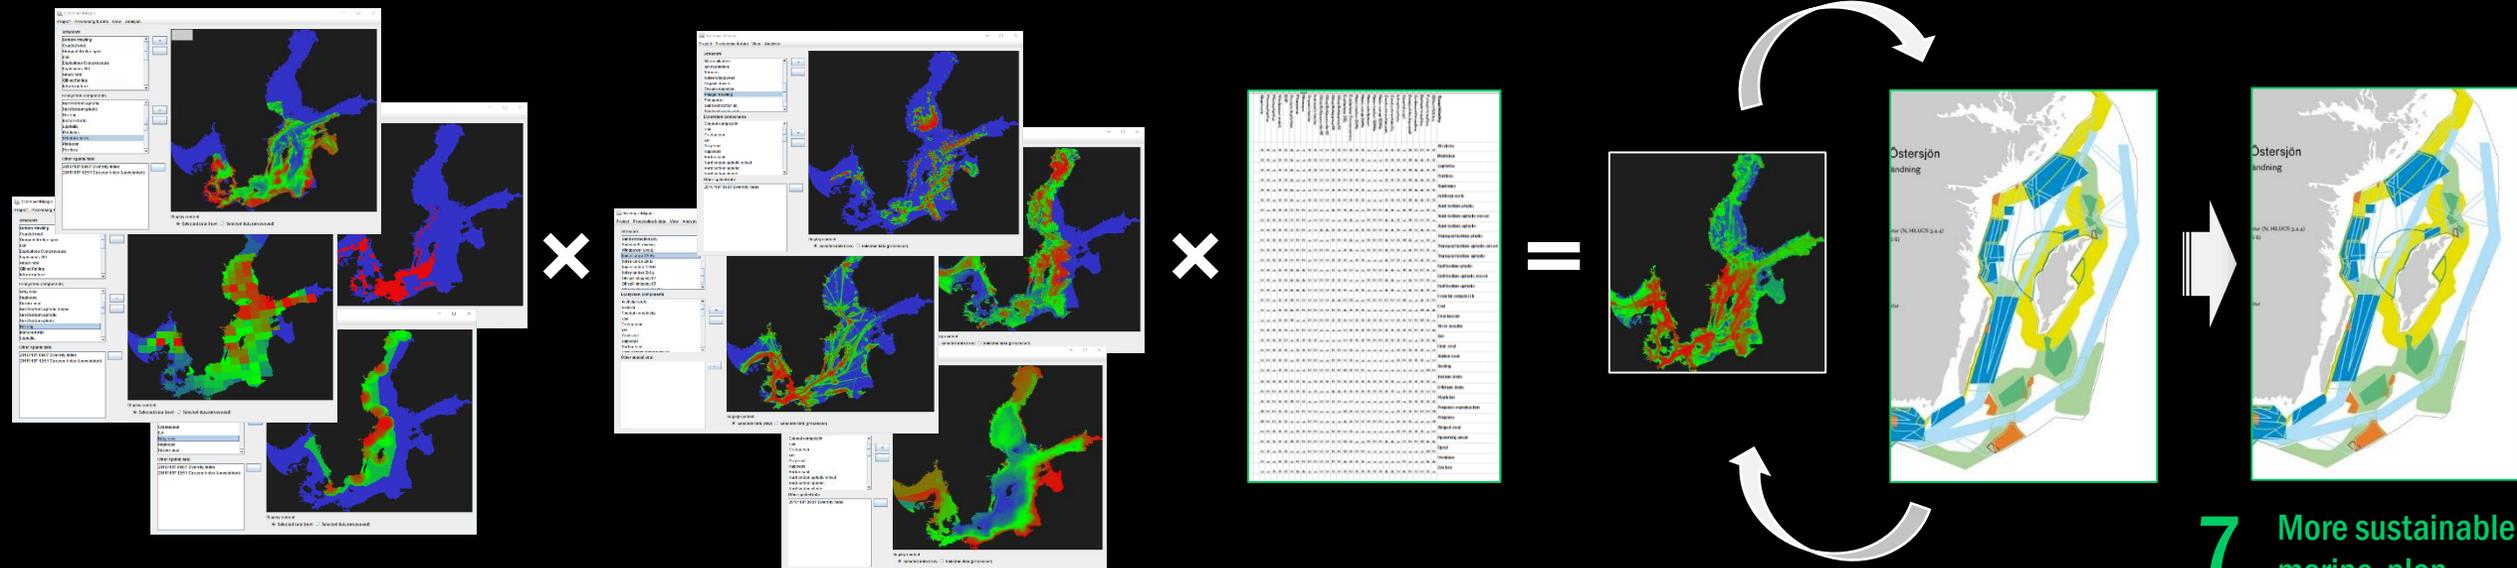

**3** Sensitivity matrix based on experts

**4** Baseline results

**5** Link pressures to maritime plan

**6** Results for plan iteration

**7** More sustainable marine plan

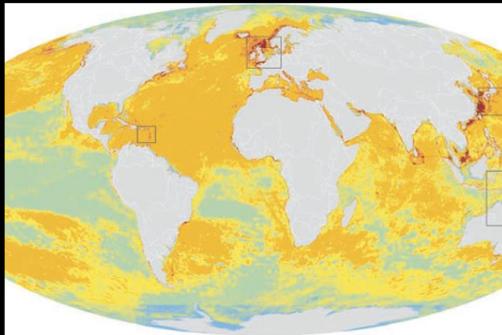

# Marine Spatial Planning is **maritime development** on maps

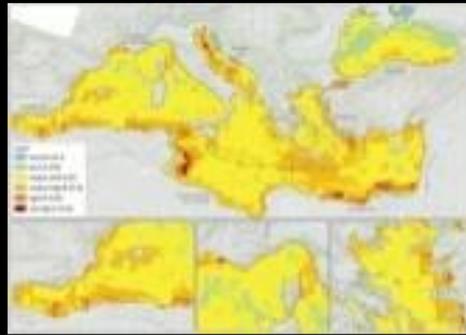

## Symphony method

- .. transparent and builds on quantitative data
- .. based on a scientific study (Halpern et al 2008)
- .. similar method has been used in several status assessments

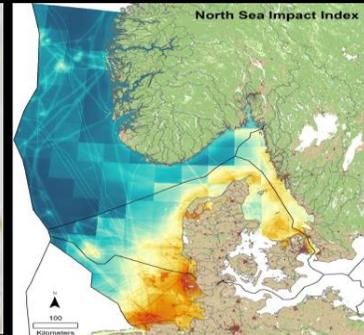

Swedish Agency  
for Marine and  
Water Management

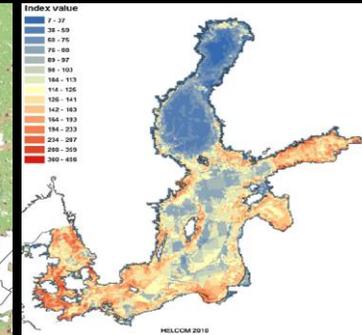

Global (Halpern 2008)

Mediterranean (Micheli)

North Sea (Andersen)

Baltic (Korpinen)
